7 Chemical Formulas And Chemical

A molecular formula is a representation of a molecule that uses chemical symbols to indicate the types of atoms followed by subscripts to show the number of atoms of each type in the molecule. (A subscript is used only when more than one atom of a given type is present.)

Formula. To write the chemical formula (of a compound) the following information should be available: 1. Symbols of the elements or the radicals that constitute the compound. 2. Valencies (combining capacity) of the elements or the radicals. The method applied for writing the chemical formula is called criss-cross method.
