First Revision No. 148-NFPA 20-2013 [Global Input] 11.4.2.6.4

Tanks shall be prevented from overflowing by one of the following:
(1) An automatic mechanism that sends an audible or visible signal to the person filling the tank when it reaches 90 percent of the tank's capacity and automatically shuts off the flow of liquid to

First Revision No. 147-NFPA 20-2013 [Global Input]

NFPA 20 requires that a fire pump be supplied by a continually available power source, usually identified as an uninterrupted power source (NFPA 20-2013, Section 9.1.5 and 9.2.1). In many cases, this requirement necessitates that a backup generator be provided as a secondary source in the event of a power failure ,

in which case the fire pump controller must be equipped with an automatic transfer switch .
